Human behaviours in evacuation crowd dynamics:
From modelling to “big data” toward crisis management

N. Bellomo, D. Clarke, L. Gibelli, P. Townsend, B.J. Vreugdenhil

PII: S1571-0645(16)30029-X
DOI: <http://dx.doi.org/10.1016/j.plrev.2016.05.014>
Reference: PLREV 749

To appear in: *Physics of Life Reviews*

Received date: 14 April 2016
Accepted date: 13 May 2016

Please cite this article in press as: Bellomo N, et al. Human behaviours in evacuation crowd dynamics: From modelling to “big data” toward crisis management. *Phys Life Rev* (2016), <http://dx.doi.org/10.1016/j.plrev.2016.05.014>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Human crowds might face stressful evacuation dynamics.
- Collective learning and psychology have an important influence on crowd dynamics.
- The kinetic theory of active particles provides a unified modelling framework.
- Predictive engines contribute to decision making in crisis management.
