This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Joint estimation of cardiac toxicity and recurrence risks after comprehensive nodal photon vs. proton therapy for breast cancer

Running title: Cardiac toxicity and recurrence risks after breast cancer

Corresponding author: Line B. Stick, BSc, Rigshospitalet, Blegdamsvej 9, 2100 Copenhagen, Denmark. Tel: 0045 35451518; E-mail: line.bjerregaard.stick@regionh.dk

Acknowledgments: The authors would like to acknowledge Birgitte Offersen and Lise Thorsen for supplying re-analysis of the DBCG-IMN study with the endpoint of disease-free survival for sensitivity analysis of our model with respect to using data from the randomized studies vs. the DBCG study.

This study was supported by Danish Cancer Society grant no. R125-A7989-15-S37, Kirsten and Freddy Johansen's Foundation and NIH-grant P30 CA 134274-04

Conflict of interest: IRV and MCA receive grants and educational fees from Varian Medical Systems.

Key words: Cardiotoxicity, Breast cancer, Risk modeling, Proton therapy
