This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

***Research Highlights**

Highlights

- A fully nonlinear Variational Boussinesq Model (FN-VBM) is derived for strong nonlinear waves.
- For strongly nonlinear waves, the dispersion quality is improved by new algorithm which minimize the kinetic energy based on deformed spectrum.
- FN-VBM is tested with various experiment (1D and 2D) and the results show a good agreement with experimental data.
