Transient acoustic wave in self-similar porous material having rigid frame: Low frequency domain

A. Berbiche, M. Fellah, Z.E.A. Fellah, E. Ogam, F.G. Mitri, C. Depollier

PII: S0165-2125(16)30092-0
DOI: http://dx.doi.org/10.1016/j.wavemoti.2016.07.015
Reference: WAMOT 2087

To appear in: *Wave Motion*

Received date: 28 March 2016
Revised date: 28 July 2016
Accepted date: 31 July 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Research Highlights

Fractals- Non-integer (fractional) dimensional space model - Self-similar porous materials - Low frequency range - Generalized lossy diffusive equation -Porosity - Permeability - Laplace transform.
