This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting galley proof before it is published in its final citable form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Regulation of catalase expression in healthy and cancer cells

Conflict of interest: No competing financial interests exist.

Funding source: Christophe Glorieux is an FNRS-Télévie recipient (Grant n° 7.4575.12F).

Keywords:

catalase, transcription regulation, cancer, transcription factors, catalase promoter.

Highlights:

- Multiple transcription factors control the expression of catalase
- Multiple mechanisms of regulation are involved in catalase expression
- Catalase expression is markedly altered and variable in tumors
