This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Mini-review

Title

Photoaging and skin cancer: is the inflammasome the missing link?

Running title

Inflammasomes in skin cancer and photoaging

Authors

Fawaz Awad^{1*}, Eman Assrawi^{1*}, Camille Louvrier¹, Claire Jumeau¹, Irina Giurgea^{1§}, Serge Amselem^{1§}, Sonia-Athina Karabina^{1§}

Highlights

- UV radiation predisposes to photoaging and skin tumorigenesis
- UV radiation activates inflammasomes
- Inflammasome activation regulates the secretion of pro-inflammatory IL-1 β and IL-18.
