The address for the corresponding author was captured as affiliation for all authors. Please check if appropriate. Bbabio(2017), doi:10.1016/j.bbabio.2017.09.006

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Enzymatic and spectroscopic properties of a thermostable [NiFe]-hydrogenase performing H₂-driven NAD⁺-reduction in the presence of O₂

Janina Preissler [a], Stefan Wahlefeld [a], Christian Lorent [a], Christian Teutloff [b], Marius Horch [a]*, Lars Lauterbach [a]*, Stephen P. Cramer [c], Ingo Zebger [a]*, and Oliver Lenz [a]*

KEYWORDS

Hydrogenase; hydrogen; oxyhydrogen reaction; nickel; iron; respiratory Complex I, flavin; iron-sulfur cluster; pyridine nucleotide; enzyme kinetics; infrared vibrational spectroscopy, electron paramagnetic resonance spectroscopy; nuclear resonance vibrational spectroscopy; biotechnology; cofactor recycling
