This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Genetic animal models to decipher the pathogenic effects of vitamin B₁₂ and folate deficiency.

Lu Peng,* Natacha Dreumont,* David Coelho,* Jean-Louis Guéant,* and Carole Arnold*.

* UMR 964 INSERM-Université de Lorraine, NGERE, Medical Faculty and University Hospital Center, Vandoeuvre les Nancy, France.

Publication type: Review article

Corresponding authors:

Carole Arnold (carole.arnold@inserm.fr) and Jean-Louis Guéant (Jean-Louis.Gueant@univ-lorraine.fr), Institut National de la Sante et de la Recherche Medicale, Nutrition-Genetics and Environmental Exposure, Medical Faculty and University Hospital Center, Nancy University, Vandoeuvre les Nancy, France.

Article features:

Number of words: 8271

Number of lines: 676

Number of pages: 18

Number of figures: 1

Number of tables: 1

Abbreviations: B₁₂, vitamin B₁₂; SAM, S-adenosylmethionine; SAH, S-adenosylhomocysteine; Hcy, Homocysteine, KO, knock-out; ES cells, embryonic stem cells; OCM, One-Carbon Metabolism; NTD, neural tube defects.
