

Accepted Manuscript

RANKL, Ephrin-Eph and Wnt10b are key intercellular communication molecules regulating bone remodeling in autologous transplanted goldfish scales

Yuya Tazaki, Kayo Sugitani, Kazuhiro Ogai, Isao Kobayashi, Haruki Kawasaki, Takafumi Aoyama, Nobuo Suzuki, Yoshiaki Tabuchi, Atsuhiko Hattori, Kei-ichiro Kitamura

PII: S1095-6433(18)30088-6

DOI: doi:[10.1016/j.cbpa.2018.06.011](https://doi.org/10.1016/j.cbpa.2018.06.011)

Reference: CBA 10348

To appear in: *Comparative Biochemistry and Physiology, Part A*

Received date: 12 March 2018

Revised date: 28 May 2018

Accepted date: 1 June 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

RANKL, Ephrin-Eph and Wnt10b are key intercellular communication molecules regulating bone remodeling in autologous transplanted goldfish scales
