Structural characterization of a lepidopteran type-II farnesyl diphosphate synthase from the spruce budworm, *Choristoneura fumiferana*: Implications for inhibitor design

Marie-Ève Picard, Audrey Nisole, Catherine Béliveau, Stephanie Sen, Aline Barbar, Rong Shi, Michel Cusson

PII: S0965-1748(17)30198-4

DOI: [10.1016/j.ibmb.2017.11.011](https://doi.org/10.1016/j.ibmb.2017.11.011)

Reference: IB 3016

To appear in: *Insect Biochemistry and Molecular Biology*

Received Date: 16 October 2017

Revised Date: 21 November 2017

Accepted Date: 22 November 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Crystal structures of a lepidopteran FPPS2 from the spruce budworm, in complex with pyridinium bisphosphonates and IPP, shed light on this enzyme's unique properties
