Lipidomic evidence that lowering the typical dietary palmitate to oleate ratio in humans decreases the leukocyte production of pro-inflammatory cytokines and muscle expression of redox-sensitive genes

C. Lawrence Kien, Janice Y. Bunn, Naomi K. Fukagawa, Vikas Anathy, Dwight E. Matthews, Karen I. Crain, David B. Ebenstein, Emily K. Tarleton, Richard E. Pratley, Matthew E. Poynter

PII: S0955-2863(15)00178-3
DOI: doi: [10.1016/j.jnutbio.2015.07.014](https://doi.org/10.1016/j.jnutbio.2015.07.014)
Reference: JNB 7398

To appear in: *The Journal of Nutritional Biochemistry*

Received date: 21 April 2015
Revised date: 9 July 2015
Accepted date: 29 July 2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.
