

Accepted Manuscript

Title: Williams syndrome transcription factor (WSTF) acts as an activator of estrogen receptor signaling in breast cancer cells and the effect can be abrogated by $1\alpha,25$ -dihydroxyvitamin D₃

Authors: Johan Lundqvist, Tove Kirkegaard, Anne-Vibeke Laenkholm, Anne Katrine Duun-Henriksen, Martin Bak, David Feldman, Anne E. Lykkesfeldt

PII: S0960-0760(17)30154-1
DOI: <http://dx.doi.org/doi:10.1016/j.jsbmb.2017.06.003>
Reference: SBMB 4956

To appear in: *Journal of Steroid Biochemistry & Molecular Biology*

Received date: 21-4-2017
Revised date: 28-5-2017
Accepted date: 6-6-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Williams syndrome transcription factor (WSTF) acts as an activator of estrogen
receptor signaling in breast cancer cells and the effect can be abrogated by
 $1\alpha,25$ -dihydroxyvitamin D₃
