Phase and amplitude of spontaneous retinal vein pulsations: An extended constant input - variable output model

David N. Levine, Hans Bebie

PII: S0026-2862(16)30019-X
DOI: doi: [10.1016/j.mvr.2016.03.005](https://doi.org/10.1016/j.mvr.2016.03.005)
Reference: YMVRE 3615

To appear in: *Microvascular Research*

Received date: 23 August 2015
Revised date: 21 February 2016
Accepted date: 12 March 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Phase and amplitude of spontaneous retinal vein pulsations:

An extended constant input - variable output model
