

## Accepted Manuscript

Title: Characterization of drug release from fibrin gels loaded with different pharmaceutical and experimental doxorubicin formulations

Authors: Maurizio Viale, Massimiliano Monticone, Irena Maric, Valentina Giglio, Aldo Profumo, Anna Aprile, Michele Cilli, Maria Luisa Abemoschi, Mattia Rocco

PII: S1734-1140(17)30445-0  
DOI: <https://doi.org/10.1016/j.pharep.2018.02.014>  
Reference: PHAREP 864

To appear in:

Received date: 28-6-2017  
Revised date: 31-1-2018  
Accepted date: 19-2-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Characterization of drug release from fibrin gels loaded with different pharmaceutical and experimental doxorubicin formulations

### Highlights

- 1) Fibrin gels (FBGs) are good vehicles for anticancer drug local delivery.
- 2) We studied the release of some doxorubicin-charged nanoparticles loaded in FBGs.
- 3) Factors involved in FBG gelation have effects that depend on drug formulation.
