Functional analysis of *StDWF4* gene in response to salt stress in potato

Xiangyan Zhou, Ning Zhang, Jiangwei Yang, Xun Tang, Yikai Wen, Huaijun Si

PII: S0981-9428(18)30033-0

DOI: [10.1016/j.plaphy.2018.01.027](https://doi.org/10.1016/j.plaphy.2018.01.027)

Reference: PLAPHY 5131

To appear in: *Plant Physiology and Biochemistry*

Received Date: 4 November 2017

Revised Date: 26 January 2018

Accepted Date: 26 January 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

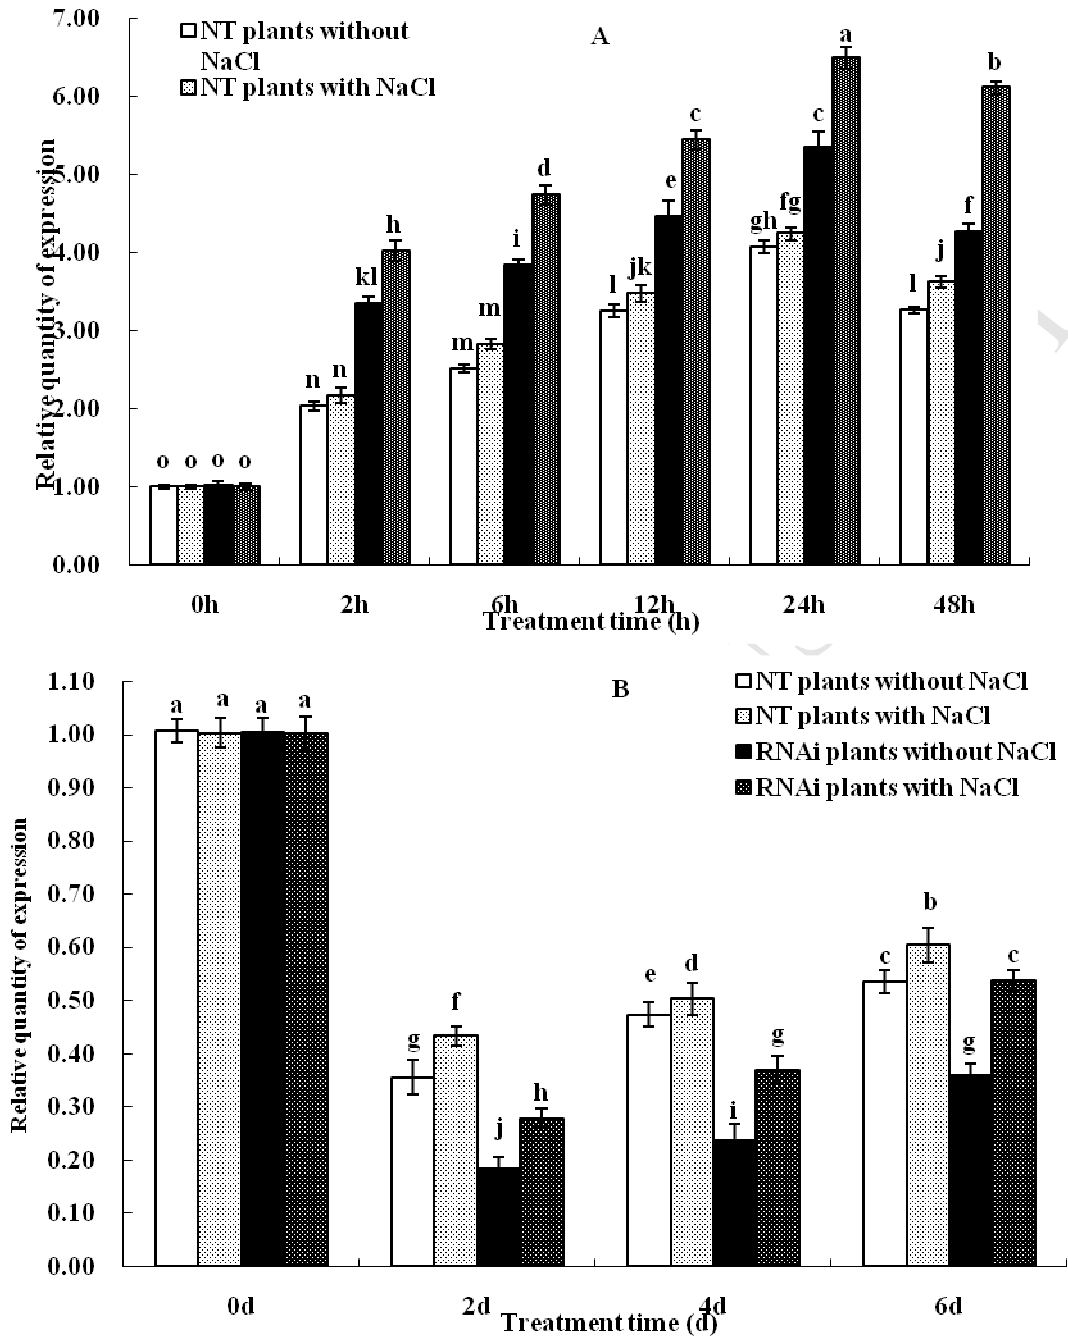

Fig. 3. Relative expression levels of the *StDWF4* gene in NT and transgenic (A, *StDWF4*-OE; B, *StDWF4*-RNAi) potato plants under salinity stress. Significant differences among means over the period of salt-stress treatments were determined according to Duncan's test at $P < 0.05$. Bars = standard errors ($n = 9$, i.e., 3 biological repeats \times 3 technical repeats).
