Title: The effects of elevated CO₂ and nitrogen nutrition on root dynamics

Authors: Itay Cohen, Tal Rapaport, Reut Tal Berger, Shimon Rachmilevitch

PII: S0168-9452(17)30196-6
DOI: <https://doi.org/10.1016/j.plantsci.2018.03.034>
Reference: PSL 9809

To appear in: *Plant Science*

Received date: 5-3-2017
Revised date: 27-3-2018
Accepted date: 31-3-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

The effects of elevated CO₂ and nitrogen nutrition on root dynamics

Itay Cohen, Tal Rapaport, Reut Tal Berger, and Shimon Rachmilevitch*

Highlights:

- Root growth is affected by nitrogen form and CO₂ concentration
- The development of root vascular tissue of tomato depends on nitrogen form and CO₂ concentration
- Root respiration rates differ between nitrogen forms and root order and depend on CO₂ concentration
