Phospholipases during membrane dynamics in malaria parasites

Ansgar Flammersfeld¹, Christina Lang², Antje Flieger² and Gabriele Pradel^{1*}

¹Division of Cellular and Applied Infection Biology, Institute of Zoology, RWTH Aachen University, Worringerweg 1, 52074 Aachen, Germany

²Division of Enteropathogenic Bacteria and *Legionella*, Robert Koch-Institute, Burgstraße 37, 38855 Wernigerode, Germany

*Corresponding author: pradel@bio2.rwth-aachen.de

Highlights:

- Data on the lipid metabolism of the malaria parasite *Plasmodium* are summarized.
- A detailed *in-silico* analysis of plasmodial phospholipases is presented.
- The roles of phospholipases during the *Plasmodium* life-cycle are discussed.
- The plasmodial phospholipases are evaluated as potential drug targets.
