This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Discusses the need for medical expertise in clinical toxinology, based on the large burden of human disease caused by toxins
- Defines clinical toxinology and what is required for expertise in this field
- Outlines a possible process for developing training in clinical toxinology to a full medical specialty level
- Incorporates the potential role of the International Society on Toxinology in developing and sustaining clinical toxinology as a medical specialty
