Early regional wall distension is strongly associated with vulnerability to ventricular fibrillation but not arrhythmia triggers following coronary occlusion in vivo

José A. Barrabés, Javier Inserte, Antonio Rodríguez-Sinovas, Marisol Ruiz-Meana, David Garcia-Dorado

PII: S0079-6107(17)30024-X

DOI: [10.1016/j.pbiomolbio.2017.05.012](https://doi.org/10.1016/j.pbiomolbio.2017.05.012)

Reference: JPBM 1209

To appear in: *Progress in Biophysics and Molecular Biology*

Received Date: 30 January 2017

Revised Date: 28 May 2017

Accepted Date: 29 May 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Early regional wall distension is strongly associated with vulnerability to ventricular fibrillation but not arrhythmia triggers following coronary occlusion in vivo**
