This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Design strategies for physical-stimuli-responsive programmable nanotherapeutics

Fitsum Feleke Sahle, Muhammad Gulfam and Tao L. Lowe*

Department of Pharmaceutical Sciences, University of Tennessee Health Sciences Center,
Memphis, TN 38163, USA

*Corresponding author: Lowe, T.L. (tlowe@uthsc.edu).

Highlights:

- Strategies for designing physical-stimuli-responsive nanotherapeutics are reviewed
- The chemistry of designing physical-stimuli-responsive nanomaterials is summarized
- The approaches to program nanomaterials by surface functionalization are compiled
- Methods to design nanotherapeutics with dual-stimuli responsiveness are discussed
