A heuristic model to quantify the impact of excess cyclodextrin on oral drug absorption from aqueous solution

Niels Erik Olesen, Peter Westh, René Holm

PII: S0939-6411(16)30087-X
DOI: <http://dx.doi.org/10.1016/j.ejpb.2016.03.011>
Reference: EJPB 12140

To appear in: *European Journal of Pharmaceutics and Biopharmaceutics*

Received Date: 16 January 2016
Revised Date: 6 March 2016
Accepted Date: 7 March 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

A heuristic model to quantify the impact of excess cyclodextrin on oral drug absorption from aqueous solution
