This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- 214 gene-specific DNA methylations were expressed significantly different between different subtypes of Colorectal Cancer
- six gene-specific DNA methylations were obtained for Colorectal Cancer
- methy\_vimentin and methy\_ TFPI2 were found significantly correlated with overall survival status of patients with Colorectal Cancer
