This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

HIV-specific B cell frequency correlates with neutralization breadth in patients naturally controlling HIV-infection

Angeline Rouers¹, Jérôme Klingler², Bin Su^{2,3}, Assia Samri⁴, Géraldine Laumond², Sophie Even⁴, Véronique Avettand-Fenoel^{5,6}, Clemence Richetta¹, Nicodème Paul², Faroudy Boufassa⁷, Laurent Hocqueloux⁸, Hugo Mouquet^{9,10}, Christine Rouzioux^{5,6}, Olivier Lambotte^{11,12,13,14}, Brigitte Autran^{4,15}, Stéphanie Graff-Dubois¹, Christiane Moog^{2*} and Arnaud Moris^{1*} for the ANRS CO21 Cohort
