Highlights:

- Low-dose Vitamin C has a synergistic effect with decitabine in vitro, the Synergistic mechanism may be related to TET2 gene.
- Low-dose Vitamin C combined with DCAG was found to be likely effective and safe in treating elderly AML patients.
- The addition of low-dose Vitamin C to DCAG appeared to improve CR and prolong OS, in elderly AML patients.

Abstract:

Background: Decitabine is widely used in the treatment of acute myeloid leukemia (AML) in elderly patients. Low-dose Vitamin C has also been indicated to induce
