Title: Air Bronchogram: A Potential Indicator of Epidermal Growth Factor Receptor Mutation in Pulmonary Subsolid Nodules

Author: Jie Dai Jingyun Shi Adiilah K Soodeen-Lalloo Peng Zhang Yang Yang Chunyan Wu Sen Jiang Xiaoli Jia Ke Fei Gening Jianga

PII: S0169-5002(16)30321-X
DOI: <http://dx.doi.org/doi:10.1016/j.lungcan.2016.05.009>
Reference: LUNG 5109

To appear in: *Lung Cancer*

Received date: 3-12-2015
Revised date: 16-4-2016
Accepted date: 12-5-2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Imaging features are associated with pathological invasiveness and EGFR status
- Tumor size and solid volume proportion are related to pathological invasiveness
- The presence of air bronchogram is suggestive of activated EGFR mutation
