The big five in fibrosis: Macrophages, myofibroblasts, matrix, mechanics, and miscommunication

Pardis Pakshir, Boris Hinz

PII: S0945-053X(18)30034-9

DOI: <https://doi.org/10.1016/j.matbio.2018.01.019>

Reference: MATBIO 1417

To appear in:

Received date: 14 January 2018

Revised date: 25 January 2018

Accepted date: 28 January 2018

Please cite this article as: Pardis Pakshir, Boris Hinz , The big five in fibrosis: Macrophages, myofibroblasts, matrix, mechanics, and miscommunication. The address for the corresponding author was captured as affiliation for all authors. Please check if appropriate. *Matbio*(2017), <https://doi.org/10.1016/j.matbio.2018.01.019>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

The big five in fibrosis: macrophages, myofibroblasts, matrix, mechanics, and miscommunication

Pardis Pakshir and Boris Hinz

Laboratory of Tissue Repair and Regeneration, Matrix Dynamics Group, Faculty of Dentistry and Institute of Biomaterials and Biomedical Engineering, University of Toronto, Toronto, Canada.

Running title: Macrophages, myofibroblast, matrix, and mechanics

Conflict: The authors have declared that no conflict of interest exists

Please address all correspondence to:
