Title: Effective discovery of rare variants by pooled target capture sequencing: A comparative analysis with individually indexed target capture sequencing

Authors: Seungjin Ryu, Jeehae Han, Trina M. Norden-Krichmar, Nicholas J. Schork, Yousin Suh

PII: S0027-5107(18)30042-3
DOI: <https://doi.org/10.1016/j.mrfmmm.2018.03.007>
Reference: MUT 11645

To appear in: *Mutation Research*

Received date: 27-3-2018
Accepted date: 28-3-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Effective discovery of rare variants by pooled target capture sequencing: A comparative analysis with individually indexed target capture sequencing

Highlights

- ▶ Evaluation of accuracy of pooled target capture sequencing by genotyping
- ▶ Analysis of frequency of variants in pooled target capture sequencing
- ▶ Comparison of variants between pooled sequencing and individually indexed sequencing
