Impact of blood manufacturing and donor characteristics on membrane water permeability and *in vitro* quality parameters during hypothermic storage of red blood cells

Abdulrahman Alshalani, Anita Howell, Jason P. Acker

PII: S0011-2240(17)30352-8

DOI: [10.1016/j.cryobiol.2017.12.008](https://doi.org/10.1016/j.cryobiol.2017.12.008)

Reference: YCRYO 3914

To appear in: *Cryobiology*

Received Date: 26 September 2017

Revised Date: 19 December 2017

Accepted Date: 20 December 2017

Please cite this article as: A. Alshalani, A. Howell, J.P. Acker, Impact of blood manufacturing and donor characteristics on membrane water permeability and *in vitro* quality parameters during hypothermic storage of red blood cells, *Cryobiology* (2018), doi: 10.1016/j.cryobiol.2017.12.008.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Impact of Blood Manufacturing and Donor Characteristics on Membrane Water Permeability and *in vitro* Quality Parameters during Hypothermic Storage of Red Blood Cells
