A computational model predicts adjunctive pharmacotherapy for cardiac safety via selective inhibition of the late cardiac Na current

Pei-Chi Yang Ph.D., Nesrine El-Bizri Ph.D., Lucia Romero Ph.D., Wayne R. Giles Ph.D., Sridharan Rajamani Ph.D., Luiz Belardinelli M.D., Colleen E. Clancy Ph.D.

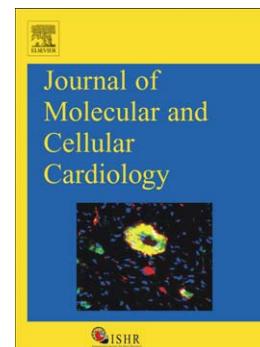

PII: S0022-2828(16)30311-X
DOI: doi: [10.1016/j.yjmcc.2016.08.011](https://doi.org/10.1016/j.yjmcc.2016.08.011)
Reference: YJMCC 8437

To appear in: *Journal of Molecular and Cellular Cardiology*

Received date: 11 December 2015
Revised date: 19 July 2016
Accepted date: 17 August 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

A computational model predicts adjunctive pharmacotherapy for cardiac safety via selective inhibition of the late cardiac Na current
