Neurodevelopmental Origins of Bipolar Disorder: iPSC Models

K. Sue O'Shea, Melvin G. McInnis

PII: S1044-7431(15)30032-4
DOI: doi: [10.1016/j.mcn.2015.11.006](https://doi.org/10.1016/j.mcn.2015.11.006)
Reference: YMCNE 3038

To appear in: *Molecular and Cellular Neuroscience*

Received date: 19 July 2015
Revised date: 14 October 2015
Accepted date: 18 November 2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Neurodevelopmental Origins of Bipolar Disorder: iPSC Models

KEY Words: Astrocyte, Autism, Cortex, Depression, Development, Epigenetics, Gene Expression, Glia, Mania, Microarray, Mood Disorder, Neuron, Oligodendrocyte, Schizophrenia, Stem Cell, Telencephalon

I. INTRODUCTION

- a. Cell Models of Human Development and Disease
- b. Bipolar Disorder

II. DEVELOPMENTAL CONTRIBUTIONS TO BIPOLAR DISORDER

- a. Prenatal and Perinatal Influences
- b. A Neuropsychological Prodrome?
- c. Structural Abnormalities
 - i. Neuroimaging
 - ii. Microscopic Alterations
- d. Gene Expression Analyses
 - i. GWAS Predictions
 - ii. Human Brain
 - iii. Human NPC/Neurons
 - iv. Surrogate Tissues
LCLs
ONPs
 - v. Reprogrammed Human Neural Cells
Induced Neurons (iNs)
Induced Pluripotent Stem Cell (iPSC) – Derived Neurons

III. LESSONS FROM THE EMBRYO

- a. Ventral Patterning of the Nervous System
- b. Dorsal Patterning
- c. Differentiation Paradigms

IV. A LIFETIME PERSPECTIVE**V. DISCUSSION AND FUTURE DIRECTIONS****VI. ACKNOWLEDGEMENTS****VII. LITERATURE CITED**
