Under stressful conditions activation of the ionotropic P2X7 receptor differentially regulates GABA and glutamate release from nerve terminals of the rat cerebral cortex

Aurora R. Barros-Barbosa, Ângela Oliveira, M. Graça Lobo, J. Miguel Cordeiro, Paulo Correia-de-Sá

PII: S0197-0186(17)30335-2

DOI: [10.1016/j.neuint.2017.11.005](https://doi.org/10.1016/j.neuint.2017.11.005)

Reference: NCI 4164

To appear in: *Neurochemistry International*

Received Date: 2 June 2017

Revised Date: 8 November 2017

Accepted Date: 10 November 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Under stressful conditions activation of the ionotropic P2X7 receptor differentially regulates GABA and glutamate release from nerve terminals of the rat cerebral cortex
