This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Running title: Live yeast and rumen efficiency

Live yeast supplementation improves rumen fibre degradation in cattle grazing tropical pastures throughout the year.

Highlights

- Live yeast supplementation enhanced rumen digestibility of tropical forages.
- The effect was independent of pasture quality and season of the year.
- Fibre digestibility was related to increase in rumen cellulolytic bacteria.
