

## Accepted Manuscript

Transmission of molecularly undetectable circulating parasite clones leads to high infection complexity in mosquitoes post feeding

Lynn Grignard, Bronner P. Gonçalves, Angela M. Early, Rachel F. Daniels, Alfred B. Tiono, Wamdaogo M. Guelbéogo, Alphonse Ouédraogo, Elke M. van Veen, Kjerstin Lanke, Amidou Diarra, Issa Nebie, Sodiomon B. Sirima, Geoff A. Targett, Sarah K. Volkman, Daniel E. Neafsey, Dyann F. Wirth, Teun Bousema, Chris Drakeley

PII: S0020-7519(18)30095-X  
DOI: <https://doi.org/10.1016/j.ijpara.2018.02.005>  
Reference: PARA 4062

To appear in: *International Journal for Parasitology*

Received Date: 12 October 2017  
Revised Date: 4 January 2018  
Accepted Date: 26 February 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Transmission of molecularly undetectable circulating parasite clones leads to high infection complexity in mosquitoes post feeding ☆
