This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Lactating sows perform well when fed a 100% organic low-protein diet
- In the subset of large litters, the low-protein diet decreased feed intake of sows
- Subsequent reproduction may be negatively affected in sows with large litters
- Piglet performance was not affected by dietary treatment of the sows
