This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A comparison between two ventilation systems for beef cattle farming was proposed
- Ceiling fans led to higher performance and cleaner animals than axial fans
- Ceiling fans led to rumination pattern compatible with a lower level of heat stress
