Prediction of functional metagenomic composition using archived 16S rDNA sequence data from the gut microbiota of livestock

B. Avila-Jaime , J.R. Kawas , J.F. Garcia-Mazcorro

PII: S1871-1413(18)30115-X
DOI: [10.1016/j.livsci.2018.04.017](https://doi.org/10.1016/j.livsci.2018.04.017)
Reference: LIVSCI 3447

To appear in: *Livestock Science*

Received date: 1 December 2017
Revised date: 26 April 2018
Accepted date: 29 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Prediction of functional metagenomic composition using archived 16S rDNA
sequence data from the gut microbiota of livestock**

To be submitted to Livestock Science as a Position paper:

<https://www.elsevier.com/journals/livestock-science/1871-1413/guide-for-authors>

Highlights

- Archived genetic sequence data is a valuable resource for livestock science.
- Functional bacterial metagenomes vary throughout the gut of cows and lambs.
- Feed efficiency may not be related with different functional bacterial metagenomes.
