This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- This study analyzes the survival patterns of pregnancy outcomes in Egyptian buffaloes.
- Egyptian buffaloes have the ability to tolerate the thermal stress up to 80 THI values without deterioration of pregnancy outcomes.
- Primiparous or high producing buffalo cows may require more effective reproductive strategies to ensure the optimum pregnancy rate.
