This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Re-location and mixing after weaning brought stress to weaned pigs.
- Toy enrichment decreased the stress of mixing after weaning.
- Pigs with intact teeth and tail got more lesions after mixing.
- Weaner pigs with intact teeth and tail should avoid to be mixed after weaning.
