This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Cetaceans, models for human disease?

**Giovanni Di Guardo**, *DVM, Dipl. ECVP*,

Scientific Editor, *Research in Veterinary Science*,

University of Teramo, Faculty of Veterinary Medicine,

Località Piano d'Accio, 64100 - Teramo, Italy (E-mail address: [gdiguardo@unite.it](mailto:gdiguardo@unite.it))

**Key-words:** Cetaceans, Animal models, Human disease, Comparative pathology, Neuropathology.

Not even one euro nor one single dollar would have been bet by any Scientist, I guess, regarding the possibility that beaked whales, deep-diving cetaceans belonging to the family *Ziphiidae*, could develop “*Gas and Fat Embolic Syndrome*” (GFES), a condition mimicking “*Decompression*
