

## Accepted Manuscript

Title: Associations between single nucleotide polymorphisms in the calcium sensing receptor and chronic kidney disease-mineral and bone disorder in cats

Authors: R.F. Geddes, R.E. Jepson, Y. Forcada, J. Elliott, H.M. Syme

PII: S1090-0233(18)30047-9  
DOI: <https://doi.org/10.1016/j.tvjl.2018.02.010>  
Reference: YTVJL 5119

To appear in:

Received date: 25-8-2017  
Revised date: 14-2-2018  
Accepted date: 15-2-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Original Article****Associations between single nucleotide polymorphisms in the calcium sensing receptor and chronic kidney disease-mineral and bone disorder in cats**

**Highlights:**

- Twelve polymorphisms have now been identified in the feline calcium sensing receptor.
- One polymorphism was associated with parathyroid hormone concentration at diagnosis of CKD in non-pedigree cats.
- No associations yet identified between identified polymorphisms and ionised calcium or phosphate in non-pedigree cats.
