pH-permeability profiles for drug substances: Experimental detection, comparison with human intestinal absorption and modelling

Mare Oja, Uko Maran

PII: S0928-0987(18)30312-9

DOI: doi:[10.1016/j.ejps.2018.07.014](https://doi.org/10.1016/j.ejps.2018.07.014)

Reference: PHASCI 4590

To appear in: *European Journal of Pharmaceutical Sciences*

Received date: 21 June 2017

Revised date: 19 June 2018

Accepted date: 4 July 2018

Content:

(for writing and reviewing purposes only)

Abstract	2
Keywords	3
1. Introduction.....	4
2. Materials and methods	8
2.1 Experimental setup and membrane permeability measurements	8
2.2 Datasets for analysis and data series for modelling.....	9
2.3 Computing structures and molecular descriptors	12
2.4 QSAR model development and diagnosis	12
2.5 The criteria for classification	13
3. Results and discussion	15
3.1 Experimental pH-permeability profiles	15
3.2 Membrane permeability vs. human intestinal absorption, cutoff value for the membrane permeability	16
3.3 QSAR models for membrane permeability	17
3.4 Discriminating high- and low-permeable compounds.....	24
3.5 External blind validation	26
3.6 Predicted pH-permeability profiles	27
4. Conclusion	30
Acknowledgements	32
Supporting information	33
Figure captions	34
Tables	35
References	37
