The expected characteristics of an *in vitro* human Blood Brain Barrier model derived from cell lines, for studying how ABC transporters influence drug permeability

Clémentine Puech, Xavier Delavenne, Nathalie Perek

PII: S1773-2247(17)31029-8

DOI: [10.1016/j.jddst.2018.03.002](https://doi.org/10.1016/j.jddst.2018.03.002)

Reference: JDDST 595

To appear in: *Journal of Drug Delivery Science and Technology*

Received Date: 30 November 2017

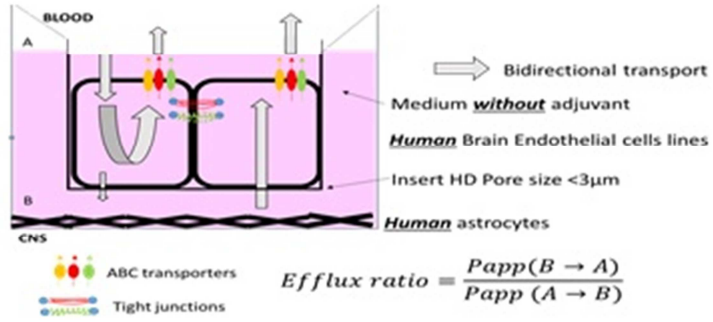

Revised Date: 9 February 2018

Accepted Date: 3 March 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

What is the ideal design for a human BBB established for drug transport studies?
