Ethnopharmacological relevance

Aidi injection is one of the most commonly used Chinese patent medicines for advanced non-small cell lung cancer (NSCLC). It is made from an extraction of Mylabris Phalerata, Radix Astragalus, Radix Ginseng, and Acanthopanax Senticosus.

Aim of the study

¹ These authors contributed equally to this work and are co-first authors for this paper.

² design, collecting data, statistical analysis, writing the article, final approval of the article

³ statistical analysis, critical revision of the article, final approval of the article

⁴ collecting data, statistical analysis, final approval of the article

⁵ collecting data, statistical analysis, final approval of the article

⁶ conception, design, statistical analysis, writing the article, critical revision of the article, final approval of the article, overall responsibility

⁷ collecting data, statistical analysis, final approval of the article
