Graphical abstract

Highlights

- Inhibitory effect on elongation for radicle and stem of *Lactuca sativa* was detected
- Champotón river water showed more phytotoxic effect than aqueous extracts of the soil.
- Radicula and stem of lettuces showed variations in growth when exposed to different water dilutions from Champoton river

ABSTRACT

The seeds germination, stem and root elongation of water lettuces (*Lactuca sativa L.*) were used to evaluate the phytotoxicity of water and soil of Champotón River, Campeche, Mexico. water and soil
