Acknowledgments

This research was self-funded and supported by the Terrence Higgins Trust and all HIV charitable organisations who supported and participated in this study. Many thanks to people with HIV who gave their consent for their stories to be told.

Disclosure

No conflicts of interest are reported in this work. The author is responsible for the content and writing of this paper.

Abstract**Objective**

Increasingly as people living with HIV (PLWHIV) aim to become parents, they engage with HIV voluntary services for support through either fertility or adoption services. Yet, little is known about the role of HIV support services workers in facilitating access to fertility treatment or child adoption. The purpose of this study was to explore the role of HIV support
