This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Title:

Cricket spin bowling remains in its biomechanical infancy.

Letter to the Editor

The primary goal of sports biomechanics is to enhance sports performance and reduce injury risk, often by improving an athletes' technique.¹ Researchers in sports biomechanics investigate existing or new techniques through quantitative analysis in an attempt to establish predictors of skilful performance and develop meaningful biomechanical models.¹ However, biomechanical research into
