Comparison of the acute perceptual and blood pressure response to heavy load and light load blood flow restriction resistance exercise in anterior cruciate ligament reconstruction patients and non-injured populations

Luke Hughes, Bruce Paton, Fares Haddad, Benjamin Rosenblatt, Conor Gissane, Stephen David Patterson

PII: S1466-853X(18)30175-5

DOI: [10.1016/j.ptsp.2018.07.002](https://doi.org/10.1016/j.ptsp.2018.07.002)

Reference: YPTSP 924

To appear in: *Physical Therapy in Sport*

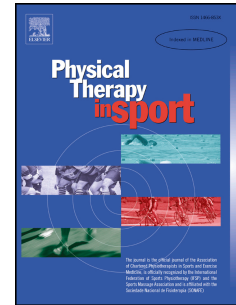

Received Date: 24 April 2018

Revised Date: 7 June 2018

Accepted Date: 7 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Article type: Original article

Title: Comparison of the acute perceptual and blood pressure response to heavy load and light load blood flow restriction resistance exercise in anterior cruciate ligament reconstruction patients and non-injured populations.

Running title: Physiological responses to resistance exercise
