This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Title: Stem Cells and Heterotopic Ossification: Lessons from Animal Models

Authors: John B. Lees-Shepard and David J. Goldhamer*

*Corresponding author

Affiliations: Department of Molecular & Cell Biology, University of Connecticut Stem Cell Institute, University of Connecticut, Storrs, CT 06269.

Key Words: animal models; heterotopic ossification; stem cells; progenitor cells; fibrodysplasia ossificans progressiva; FOP; ACVR1; ALK2; activin; BMP; fibro/adipogenic progenitors; FAPs; satellite cell; endothelium; skeletal muscle; tendon; PDGFR α ; TIE2; scleraxis; Mx1; osteogenesis; cartilage; bone
