Title: Effects of postnatal handling on adult behavior and brain mRNA expression of serotonin receptor, brain-derived neurotrophic factor and GABA-A receptor subunit

Authors: Haiyan Li, Chihiro Ishikawa, Takashi Shiga

PII: S0736-5748(18)30016-9
DOI: <https://doi.org/10.1016/j.ijdevneu.2018.04.002>
Reference: DN 2252

To appear in: *Int. J. Devl Neuroscience*

Received date: 12-1-2018
Revised date: 4-4-2018
Accepted date: 6-4-2018

Please cite this article as: Li H, Ishikawa C, Shiga T, Effects of postnatal handling on adult behavior and brain mRNA expression of serotonin receptor, brain-derived neurotrophic factor and GABA-A receptor subunit, *International Journal of Developmental Neuroscience* (2018), <https://doi.org/10.1016/j.ijdevneu.2018.04.002>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Effects of postnatal handling on adult behavior and brain mRNA expression of serotonin receptor, brain-derived neurotrophic factor and GABA-A receptor subunit

Highlights

- Postnatal handling reduced anxiety-like behavior.
- Postnatal handling improved spatial learning and memory.
- 5-HT1A receptor mRNA expression was changed in amygdala and dorsal raphe nucleus.
- BDNF mRNA expression was changed in amygdala, dorsal hippocampus and dorsal
