This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Roles of progesterone receptor membrane component 1 and membrane progestin receptor alpha in regulation of zebrafish oocyte maturation

² Current address: The School of Marine Sciences, Ruppin Academic Center, Michmoret, Israel

Keywords: Pgrmc1, mPR α , Erbb2, IGF-1, AG205, adaptor protein, zebrafish, oocyte maturation

Summary sentence: Progesterone membrane receptor component 1 is required for plasma membrane expression of membrane progestin receptor alpha mediating progestin induction of oocyte maturation and the completion of germinal vesicle breakdown in zebrafish.
